

Editing Spatial and Attribute Data in ArcGIS Pro

Why do you need or want to edit data in a GIS? For some the answer may seem obvious. But take a quick moment to think about it. A favorite question that normally comes from managers or elected officials is “When will our GIS be done?”, as if a GIS is a house or a car - that it has a specific end or construction date. GIS is ever evolving and changing because the real world features it represents are always changing. Parcels are being merged, divided, bought and sold. New waterlines are being placed in service while others are removed. As long as the world we represent in our GIS is changing, we will need to update our GIS to reflect all those changes.

Topics Include:

- Editing Workflow and Options
- Creating New Features
- Creating New Features from Existing Features
- Editing Existing Features
- Editing Attributes
- Editing with Topologies

Instructor:	Eric Pimpler, M.A., GeoSpatial Training Services, LLC
Dates:	Wednesday, July 30
Location:	Turquoise Room (Tax Commission)
Hours:	8 hours

Notes:	This workshop will require a minimum of 12 students. Laptops and GISPro student accounts are provided.
